La Logica De La Investigacion Cientifica/The Logic of the Scientific Discovery (Estructura Y Funcion/Structure and Function) (Spanish Edition) Karl Raimund Popper

La serie de articulos recogidos en este volumen constituye una exposicion de las opiniones epistemologicas de Karl R. Popper, mas sistematica de lo que a primera vista pudiera parecer, dada la estructura de la obra. El autor, uno de los filosofos de la ciencia mas solidos y audaces del siglo XX, expone aqui algunas de las claves fundamentales de su pensamiento.El punto de partida de su epistemologia es el realismo del sentido comun, realismo critico por cuanto que afirma constantemente en contra del mito del marco teorico la necesidad de poner en tela de juicio el propio punto de partida. Sin embargo, el autor rechaza la teoria del conocimiento del sentido comun que concibe el conocimiento como un proceso pasivo teoria del cubo, consistente en acumular los datos directamente recibidos a traves de los sentidos, para situar en su lugar una concepcion activa del conocer teoria del reflector, necesariamente ligada a expectativas previas; de modo analogo a como ocurre en el proceso de la evolucion biologica.Tanto la evolucion como el desarrollo del conocimiento exigen una estructura innata geneticamente a priori aunque no valida a priori, que suministra el material de partida que la seleccion natural o la critica racional han de modificar para producir el siguiente estadio de desarrollo. Desde esta perspectiva se lleva a cabo la critica del inductivismo, poniendo en tela de juicio el caracter definitivo de toda pretension de conocer, abogando por una critica continua y sin fronteras de todas sus instancias, que no son mas que conjeturas provisionales.
